```
static void Main()
 {
             bool checkOther = false;
             try
             {
                 m_OneProcess = new System.Threading.Mutex (true, "App", out
checkOther);

                 if (false == checkOther)
                 {
                     return ;
                 }

                 Application.Run(new Form1());

             }

             catch {}
             finally
             {
                 if (null != m_OneProcess && false != checkOther)
                 {
                     m_OneProcess.ReleaseMutex ();
                 }
             }
 }
```
